

WhiteRIP 8

The most advanced printing software suitable for different sectors such as textiles and objects. Equipped with numerous features to increase productivity and optimize ink consumption and many extra modules to extend its features such as job tracking, variable data printing and many more. WhiteRIP 8 has dedicated version for UV, DTG and DTF each with its special function to excel in their sector.

Open to integrations

The importance of an interconnected system is important to optimize and increase productivity. WhiteRIP 8 has been developed with a focus on integration, giving many options to achieve a simple and effective integration.

WhiteRIP 8 has many options to achieve this

Hotfolder Print automatically by placing your images in a specific folder. With the XML Hotfolder module, it is also possible to attach some parameters to the image such as dimension, position, environment and rotation of the image.

Print report Generate a complete report of each print with preview, information on ink consumption, number of printed copies and print settings.

Print from barcode Designed for more automated production environments, allows the operator to launch the print automatically by scanning the barcode on the order.

Job report Possibility of tracking the jobs inside the RIP, on csv or xml, both in input and output for the integration in Industry 4.0 environments.

WhiteRIP 8 DTF

Our dedicated version for Direct to Film printing includes features and optimizations developed for the best DTF printing experience.

Auto mirroring To simplify the workflow, WhiteRIP automatically mirrors the images during the print phase. To not distract you while you are organizing the graphics, you will see them right and you don't need to remember to do anything. Just press Print and WhiteRIP will automatically take care of it.

Whitebase WhiteRIP generates automatically the white layer with specific algorithms for DTF applications with optimization based on the media color. You can also specify the white layer on the same PSD file with a specific layer. roll to roll & paper. Manage multiple output options to print film on both reel or sheets.

WhiteRIP 8 UV & DTG

Our version for UV and DTG printing includes many new features with version 8 to help you optimize your pre-press work and optimize it for great print results.

Template The main feature of WhiteRIP has been revised to increase its functionality. With WhiteRIP 8, you can work on more templates at once, and the template creation wizard is more simple.

Whitebase optimizations WhiteRIP can generate automatically the white layer base, or you can load a custom one. With WhiteRIP 8, you can also specify the white layer on the same file with a PSD layer, or let the software generate it with optimization based on the media color. If you are printing an artwork on a black T-shirt, WhiteRIP can optimize the white layer without printing it under black pixels, or if you print the same image but on a different media color, it will optimize the whitebase accordingly.

Variable data Management of self-incrementing variable data or from external sources with the possibility of generating 1D and 2D barcodes. The variable data is automatically updated at each print, and in case of self-incremental data, it is saved locally.

New
version

Try WhiteRIP for free

Visit our website www.whiterip.com and download the free demo version!

You will be able to try all the software functions, without prints number or time limits!

Prints with 3D effect

Varnish management

Are you a printer manufacturer?

Are you an OEM? We can customize our software with oem logo, custom colors and even customized functions realized on your demands. This allow you to provide the best user experience for your customers thanks to a tailored solution. Contact us for more info..

Compatibility

We work closely with major printer manufacturers to continuously expand support for new models. Most Epson-based printers are supported, as well as printers of main DTG and UV Led brands.

Visit www.whiterip.com for completed and updated list.
