## RIGHT-CLICK EDIT

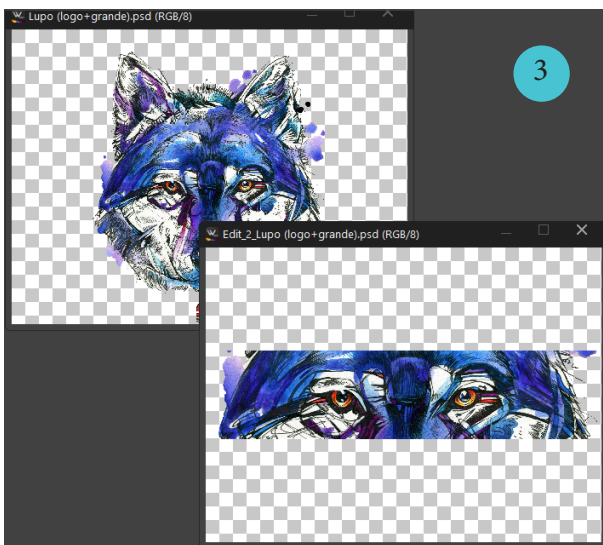

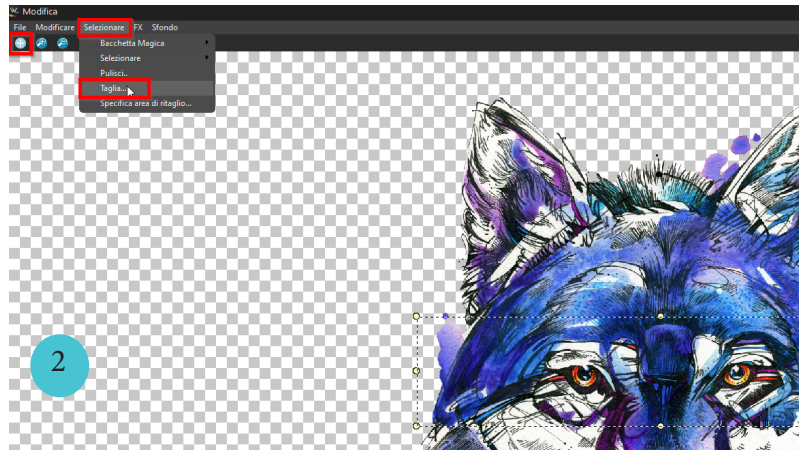

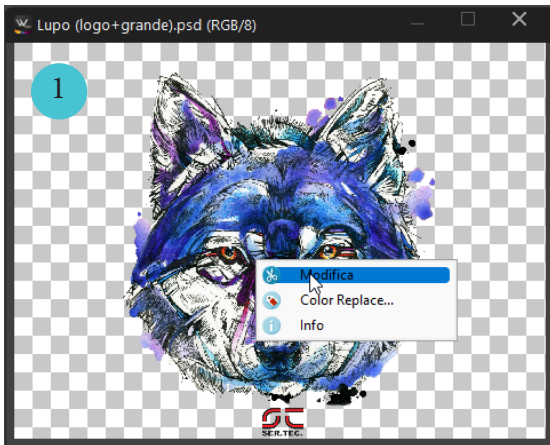

In the main menu, locate the “Open” icon situated at the top left of the program. Select the desired image, right-click on the imported image, and from the context menu, choose the “Edit” option. This will open a set of editing tools:

Click on the first blue circle “+” at the top left to activate the cropping tool. Define the area of the image you want to isolate.

Next, click on the “Select” option at the top left and then on “Cut.” This allows you to crop the previously selected area, preparing it for editing.

Click on the green “YES” button at the bottom left to confirm the crop. A confirmation window will appear, asking if you want to save the edited image. After clicking “YES,” a save window will appear. Confirm by clicking “OK” to save the changes made to the image.
